**Case: 29992 Excel Import mass delete**

Requested at IMUC 2016: an Import History section has been added to the footer bar on the JV Document page. This adds the ability to view and delete entire excel imports making it easier to mass delete and re-upload spreadsheets instead of having to delete each line one at a time or clear the entire document and start over.

Note: only newly imported files that are imported after the 4.3.13 upgrade is installed will show up on this dialog.
