Case: 32838 New config setting for send to Departments without being in balance

Added the ability to enable/disable the "Send to a Department" option on the Approval page when a document is not in balance. This can be toggled using Configuration Setting 101. By default un-balanced documents can be submitted to Departments.

Case: 32865 Check for warnings after every save

If the Document screen is configured to display warning messages, the system will now check for warnings every time any save event occurs rather than only when the page first loads. This includes saving the header, saving line items, deleting line items, and importing from Excel.

Global Changes That Affect All Applications

Case: 31711 Allow hidden page bars to stay hidden

When clicking the up arrow on the right side of the page title bar to hide the header logo and environment label (to make more room on the screen) the system will now remember the hidden/visible state as a user profile setting. This will persist for the user between sessions.

Case: 31719 Advanced option to return unique records only

A new "Unique Records" section has been added on the Advanced Options tab of any report that has Group Functions enabled. Select the "Display only unique records" checkbox to limit the report results to only unique results (in other words, to group records together into unique results i.e. in technical terms: apply a GROUP BY to the query).

Case: 32794 Dashboard sticky filters

Dashboard filters are now "sticky" and stored in a user's profile. When a user selects a value for a dashboard filter, the selected value will remain in place when the user comes back to the dashboard later. This persists beyond their session so even days/weeks later it will remember the last selected filter until the user removes the selection.

Case: 32932 Execution history statistics

Fixed a bug that may have caused inaccurate tracking of execution counts on normal reports and Pinned Reports.

Case: 33096 Drilldown on graph piece to read only pinned report throws access denied

Fixed a bug where drilling down on a part of a graph to a read only Pinned Report would throw an access denied error. This was back ported into a version 4.3.16 patch.
