FASTAR

Case: 26742   Support for hierarchy coding filters on custom reports

When creating a custom reporting page, if you use certain standard field names for hierarchy GL code filters, these fields will now correctly filter on hierarchy codes. Please see documentation and training videos for more details.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific

FASTBUDGET

Case: 19661   Splitting Batches not updating source transactions properly

Fixed a bug when batching if multiple batch numbers are created. For example, in the past, if you had 12,000 records that were split into two batches: 9,000 in A and 3,000 in B, after posting all 12,000 original records would be updated as if they were all in batch B, and it would appear as if batch A had no transactions. This case will correctly update the 9,000 transactions as batch A and the second 3,000 transactions as batch B. This works when batching either Detailed or Summary records.

Case: 23761   Dynamically generate import query list of fields from Excel Import Spec

On the Budget Admin -> Import Data screen, when selecting the "By Custom Query" option, the list of fields that are required to be in the query (that display on the right side of the screen) are now dynamically generated based on the setup of the Excel Import Spec.

Case: 24772   Allow edit of imported data before posting

On external source and Admin Excel import, you can now edit any invalid GL codes prior to completing the import. This is especially useful when importing from your ERP system where you cannot edit the GL codes at source. We have also streamlined the wizard in this case for Development vs. Admin imports.

Case: 26209   Add Budget Type filter to Review End User Requests report

Added Budget Type filter to the Review End User Requests report.

Case: 26263   Development Entry: Additional Info field not clearing

Fixed a bug on the Development Entry screen. When adding a new record the Additional Info field was always populated with the value of the first row in the grid.

Case: 26266   Create new Manage Development Series pages

Updated the Manage Development Series screen to a new format.

Case: 26456   Clicking in Comments field in Budget Transfer header clears all data from the field

Fixed a bug where any comments in the Comments field of the header record of a Budget Transfer would be wiped out when the field gained focus.

Case: 26552   Remove company input from Budget selection page

Removed company dropdown input from the main Budget selection page when entering the application (when selecting a Chart and Fiscal Year).

Case: 26553   Update controls on Development and Admin Entry increase

Converted GL filter controls to Multi Level List style hierarchy based filters.

Case: 26554   Create New Manage Budget Series pages

Updated the Manage Budget Series page to new style data entry grid, and removed the horizontal scroll bar. This will make it easier to view columns on the right hand side that you used to have to scroll to see.

Case: 26682   Upgrade Budget Admin pages

Removed the delete tab, upgraded the main datagrid, allow deleting directly from the datagrid.

Case: 26730   Add budget type column and filter to Budget Transfer Status report

The Budget Type filter, and column, have been added to the Budget Transfer Status report.

Case: 26747   Budget to Finance integration - view changes

Updated integration with Finance Reporting to allow for spreading model logic % spread and also to accumulate the data by budget period. i.e. if data goes into period 6, it will now show in period 7, period 8, etc.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific

FASTBUILDER

Case: 26438   Exporting/importing custom reports with large queries

Modified how custom reports are exported so that reports with large queries won't generate errors when importing.

Old reports stored in .mcsl files that were exported before this version will still import correctly, unless the query is too big in which case you'll have to re-export the report.

Case: 26604   Automatically issue grants to Client Warehouse Tables

When new tables are created using the Client Warehouse Builder option, these tables are automatically granted access to the FAST "Query" account allowing the tables to be used by Query Builder and Page Builder. Access was not being granted to the FAST "Base" account.

We are now automatically granting access to the FAST "Base" account as well. This allows custom reports to be used as the source for Dynamic Selections on baseline reports.

FASTFINANCE

Case: 25630   Add Document Text to Document Details drill down

When drilling down on a JV, Invoice or PO, if the document has header text, this will now display in a "Document Text:" section. If the document does not have header text this section will not display.

Case: 26306   Add "Period To" to filter cookie trail on Date Range report PDF/Excel output

When exporting the Date Range format of any of the three Operating Statement summary reports, the resulting file will now show both the From and To periods selected in the filter options (previously, only the From period was displayed).

Case: 26783   Bug preventing liquidated encumbrances from appearing on Document Search and Document Type Query

Fixed a bug where searching for POs on the Document Search or Document Type Query screens would not return results if the PO was already liquidated.

Case: 26879   Show associated POs/Reqs in Doc Ref Num column on Document Type Query

On the Document Type Query report, when searching for a PO, any associated Reqs will now show in the Doc Ref Num column. When searching for a Req, any associated POs will show in the Doc Ref Num column.

FASTHR

Case: 26428   Create "Reports To" reporting page

Added a new "Position Reports To" report under the Employees menu.

Case: 26443   Add columns to Beneficiary table & make a new Beneficiary reporting page

Added columns to the FASTHR.SYNBENEFICIARY warehouse table, and created a new Beneficiary reporting page.

Case: 26576   Add JOB_ELIGIBLE_DATE to warehouse

Added JOB_ELIGIBLE_DATE into ALLJOBS, CURRENTJOBRECORDS and CURRENTPRIMARYJOBS tables. This field is populated from NBRBJOB_ELIGIBLE_DATE.

Case: 26577   Data as at date does not represent when client warehouse steps complete

The "Data as at" date label was showing the date when the baseline FAST data refresh completed. This has been updated to show the date when the custom Client Warehouse steps have completed.

Case: 26620   Add Termination Reason to the Employee Terminated Information report

Added Termination Reason column to the Employees -> Termination Listing report.

Case: 26643   Add race to Employee Info table

Race codes and descriptions have been added to the FASTHR.SYNEMPLOYEEINFO warehouse table. These columns have also been pushed out to the Employee New Hires report, but disabled by default.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific

FASTJV

Case: 26743   Support for hierarchy coding filters on custom reports

When creating a custom reporting page, if you use certain standard field names for hierarchy GL code filters, these fields will now correctly filter on hierarchy codes. Please see documentation and training videos for more details.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific

FASTPCARD

Case: 26744   Support for hierarchy coding filters on custom reports

When creating a custom reporting page, if you use certain standard field names for hierarchy GL code filters, these fields will now correctly filter on hierarchy codes. Please see documentation and training videos for more details.

FASTPORTAL

Case: 23793   Add filters to Scheduler page

A Filter Options tab has been added to the Scheduler page to replace the previous method of filtering data using check boxes.

Case: 25173   Load a Pinned Report without auto executing

Updated the pinned reports tab to allow users to click on the report name to load the report without executing it.

Users can still click the execute button/column to load and auto-execute the report with a single click.

Case: 25707   Use current system time for default START TIME in Scheduler

When creating a new scheduled report, the default selected start time will be based on the current time (rounded to the nearest half hour) rather than always defaulting to midnight.

Case: 26369   Improve Excel import process on new style data entry pages

Changed how Excel import works on data entry pages.

Large files with many rows will now import without causing the local web browser to freeze or crash.

If validation fails the system will generate an Excel file for the user to download that highlights which cells failed validation.

If some but not all rows are successfully imported the system will generate an Excel file with the rows that failed to import.

Case: 26674   Show mandatory filters before Execute button is clicked

Updated the Filter Options tab on all reporting pages in all applications to make it more obvious, before attempting to run the report, when a filter is required.

Case: 26676   Move execute button for pinned report to left most position

With the changes from case 25173 allowing users to load (but not execute) a pinned report by clicking on the name of the report, we have moved the execute button to the far left of the pinned reports list so this button is right beside the report name, making it easier to decide between loading and executing the report.

Case: 26820   Don't attach blank reports when Report Scheduler runs but returns no results

When a schedule runs successfully but the report returns no results, instead of getting a blank report attached to the email, the user will now get a message that indicates the schedule ran but the report returned no results.

FASTRESEARCH

Case: 26745   Support for hierarchy coding filters on custom reports

When creating a custom reporting page, if you use certain standard field names for hierarchy GL code filters, these fields will now correctly filter on hierarchy codes. Please see documentation and training videos for more details.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific

FASTSTUDENT

Case: 26099   Grade PDF on CRN Approval page

CRN Grade Approval PDF has been updated to support listing multiple instructor names.

Case: 26517   Data as at date does not represent when client warehouse steps complete

The "Data as at" date label was showing the date when the baseline FAST data refresh completed. This has been updated to show the date when the custom Client Warehouse steps have completed.

Case: 26606   Reduce memory use during the addition of history records into the class list table

Modified data refresh process to use less memory when loading the class list warehouse table.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific

FASTWEBREQ

Case: 26493   Name field added to PO_REPORTING warehouse table

Name field from the PO Header has been added to the PO Reporting warehouse table.

Case: 26578   Data as at date does not represent when client warehouse steps complete

The "Data as at" date label was showing the date when the baseline FAST data refresh completed. This has been updated to show the date when the custom Client Warehouse steps have completed.

Case: 26664   Can't use Advanced Options on Requisition Status report

Fixed a bug that was causing the Requisition Status report to break when trying to use Group Functions on the Advanced Options tab.

Case: 26724   Need to check to make sure FOAPAL codes associated with a Requisiton are still active when posting

Fixed a bug during the posting process where FOAPAL code validation was not checking the status indicator to enforce that only active codes would be posted.

Case: 26746   Support for hierarchy coding filters on custom reports

When creating a custom reporting page, if you use certain standard field names for hierarchy GL code filters, these fields will now correctly filter on hierarchy codes. Please see documentation and training videos for more details.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific
