Release Notes: Version 4.3.17

Global Changes That Affect All Applications

Case: 31711   Allow hidden page bars to stay hidden

When clicking the up arrow on the right side of the page title bar to hide the header logo and environment label (to make more room on the screen) the system will now remember the hidden/visible state as a user profile setting.This will persist for the user between sessions.

Case: 31719   Advanced option to return unique records only

A new "Unique Records" section has been added on the Advanced Options tab of any report that has Group Functions enabled. Select the "Display only unique records" checkbox to limit the report results to only unique results (in other words, to group records together into unique results i.e. in technical terms: apply a GROUP BY to the query).

Case: 32794   Dashboard sticky filters

Dashboard filters are now "sticky" and stored in a user's profile. When a user selects a value for a dashboard filter, the selected value will remain in place when the user comes back to the dashboard later. This persists beyond their session so even days/weeks later it will remember the last selected filter until the user removes the selection.

Case: 32932   Execution history statistics

Fixed a bug that may have caused inaccurate tracking of execution counts on normal reports and Pinned Reports.

Case: 33096   Drilldown on graph piece to read only pinned report throws access denied

Fixed a bug where drilling down on a part of a graph to a read only Pinned Report would throw an access denied error. This was back ported into a version 4.3.16 patch.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific settings.
