FASTJV

Case: 32901   Cannot Change Alias on Excel Import Spec for JV Document

Fixed a bug with the Excel Import Spec in FASTJV. Excel header column aliases can now be changed.

Case: 33344   Copy a document that was imported then mass delete from the copy

Fixed a bug when a new document was copied from an old one that had been imported from Excel: when the "mass delete" was used on the new copy it would delete the line items from both the original document and the new copied document.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific settings.

Global Changes That Affect All Applications

Case: 31860   Allow for sharing of Dynamic Selections with groups

Similar changes have been made for sharing Dynamic Selections as the changes that were made in version 4.3.16 for sharing Pinned Reports with groups (31859) and sharing Dashboards with groups (31596).

A Dynamic Selection (provided it does not expire) can now be shared. Any member of the group(s) can use the Dynamic Selection and also create Pinned Reports using it. Site administrators and application master users can share a Dynamic Selection with any group. Users with the "[Application] - Share/Edit Dynamic Selections" role can share a Dynamic Selection with any group that they are also a member of.

Case: 33032   Subtotaling via Advanced Options tab

You can now calculate subtotals for up to three fields on most standard reports throughout the application suite. This feature can be accessed from the Advanced Options tab.

Case: 33307   Scroll Over Percentage display error on Graph

Previously, when a percentage was displayed within a graph, the "scroll-over" display showed the percentage amount displayed with a decimal and a percentage sign as opposed to one or the other. For example, 39% became .39%. This issue has been resolved.

Case: 33458   Prevent unicode characters in PDF outputs to prompt for asian font pack download

When users entered (or copy/pasted) certain unicode characters in data entry fields (such as comments/descriptions/names/etc) this would sometimes cause Adobe Reader to prompt the user to download a font pack, which wouldn't help and the PDF would not render. If viewed in another application (ex. inline in a web browser tab) the formatting and font kerning may appear broken.

We have adjusted our PDF export process to use a slightly different font that supports more unicode characters.

Case: 33467   Allow .PNG files to be uploaded as attachments

A "Portable Network Graphics" file uses the .PNG file extension. This is a popular graphics format similar to .JPG or .GIF or .BMP. This file format is now allowed to be uploaded as a document attachment anywhere in FAST where attachments can be uploaded.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific settings.
