FASTHR

Case: 34625   Disposition reporting

The Payroll History report now runs in either warehouse mode, selecting data from the warehouse, or in Live mode, where it will run against the ERP system real time. This page was changed to include the live reporting so users could use it to validate payroll as it was getting run.   By default, this feature is turned off and the page runs as it did before against the warehouse. If you want to allow a user to run it against the live ERP system you need assign the built in role HR_LIVE_REPORTING to that user. This will give them the ability to select where to run the report from.

Case: 34990   HR refresh move remaining tables to STAGE tables for refresh

Add STAGE tables to warehouse to improve refresh times. (note this will consume additional disk space)

Case: 35219   Reconfigure HR indexes on large tables

Rework indexes on large tables to improve query response times.

Case: 36365   Add fields for Faculty tables

Add following fields to facutly tables:

FACULTYCONTACT
-activity_date

FACULTYRANK
-rank_desc
-institution_rank_code

FACULTYAPPT
-tenure_desc

FACULTYSABB
-cf01_code
-cf03_Code
-next_date
-lrea_code_next
decision_defer_date
-decision_date
-trans_no
-comm_full_date
-appeal_date
-activity_date
-user_id

FACULTYLIST
-discipline_Code
discipline_desc

Case: 36405   Update coding fields for actv and locn

Update refresh to add activity and location into coding fields for payroll reporting

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific settings.

Case: 36412   update job history function for new refresh

Update function for class code on all jobs to get the e class from the job history table that cooresponding to the job at that time, or if not found, use current e class from person record

Global Changes That Affect All Applications

Case: 33966   Improve how training videos are displayed

A new interface was created for training videos. This includes playlists, tags, improved search, and the ability to administer videos and playlists to customize names, sort orders, etc.

Case: 34902   Pinned Reports Maintenance page

Removed the "Maintained By" column from the Pinned Reports administration screen.

Moving forward, if a shared Pinned Report needs to be modified by someone other than the creator, the "View/Edit Roles" column will be the only option available to allow for this.

Case: 35035   Add the ability to format and label aggregated columns

When applying a Group Function via the Advanced Options tab to aggregate a column (ex. COUNT on a column named "Student ID") the column can now have the title updated and the display format overridden.

For example if you wanted to rename the "Student ID" column to be "Count of IDs" you could. It might have been confusing if the count returned 1234 results and the user thought there was one result with Student ID = 1234.

Another reason to add this was to allow the format to be overridden. If the original column had a format set to to "number, no decimals" then an AVERAGE function was applied you may want to see decimals for example.

Case: 35043   Object list in Query Builder

Administration forms have been created for administrators to create synonyms or views for objects that the query schema has access to from the other side of a database link. There is also an administration form that can be used to restrict the object list to only specific schema and object types. These forms are named External Object Types and External Objects under the Query Builder menu.

Case: 35191   Administration of training video playlists

Created an administration page for Training Video Playlists. Administrators can edit existing baseline playlists or add/remove their own training video playlists. This is located under Site Administration -> Information -> Training Video Admin -> Playlist Admin.

Case: 35211   New Advanced Options

Improved the layout and functionality of the Advanced Options tab on reporting pages:
- functionality is organized in sections.
- sort order is broken out into it's own section.
- all column titles, output formats and alignment can be overridden by end users (these changes are execution specific and can be pinned, but they are not "sticky" and will reset back to default when the report is re-loaded).
- sections are collapsed by default unless used.

Case: 35260   Administration of training videos

Created an administration page for Training Videos. Administrators can edit existing baseline videos (to change titles, sort order, tags, enable/disable, etc) or add/remove their own site specific custom training videos. This is located under Site Administration -> Information -> Training Video Admin -> Video Admin.

Case: 36360   click on row to highlight

When you Click on a line anywhere in a report or data entry grid the selected row will highlight the line you are on and stay there. This is especially helpful on reports and data entry pages that scroll horizontally so you can tell what record you are on.

Case: 36436   Speed up Pinned Report folder display

In certain situations, pinned report folders took a long time to open. Modified queries behind pinned report page to increase speed.

Case: 36452   Error Adding filters to Data Entry pages

Resolved issue from 4.4.03 - Error encountered when adding filters to data entry pages.
