

FASTAR

Case: 25309 Converted Age Maintenance to a new style data entry page

A new style data entry page has been created to replace the old Age Maintenance page.

Case: 25329 Converted Periods to a new style data entry page

A new style data entry page has been created to replace the old Periods page.

Case: 25408 Converted Customer Types to a new style data entry page

A new style data entry page has been created to replace the old Customer Types page.

Case: 25409 Converted Currency to a new style data entry page

A new style data entry page was created to replace the old Currency Types page.

Case: 25410 Converted Payment Types to a new style data entry page

A new style data entry page was created to replace the old Payment Types page.

FASTBUDGET

Case: 25155 Fix Fiscal Year filter on Batch Summary and Status report

Fixed a bug where the Fiscal Year filter on the Batch Summary and Status report was not being used (all rows were being returned when the filter was used).

FASTFINANCE

Case: 25255 Document Details - FAST AR: invoices from FAST Research in wrong format

When drilling down on a FAST AR Batch number in Finance Reporting, the system allows the user to re-generate the original Invoice PDF. If that Invoice came from the FAST Research system, the system was incorrectly rendering the AR Invoice format instead of the Research Invoice format.

Case: 25265 Allow drilling down on \$0 lines from Current Year Budget by Position report

Added the ability to drill down from the Current Year Budget by Position report on zero dollar amounts. Previously this report would never drill down on zero dollar amounts (for Budgets, Actuals, or Commitments) even though multiple transactions might net to \$0. (This can be turned off via customization if you want the original behavior.)

Case: 25287 Change how we load data for "Budget by Position" report

Changed the data refresh process that warehouses data for the "Budget by Position" report for clients who own FAST Budgets. When testing this upgrade please ensure data is not doubled up or shifted into the wrong column on this report.

Case: 25293 Add Prior Year Q1-Q4 Actuals to User Defined report

Added four new columns, Prior Year Q1-Q4 Actuals, to the User Defined, Trial Balance and Financial Statements reports.

FASTHR

Case: 25307 Need to have stage table index rebuilt after table is populated

Previous we didn't rebuild the indexes on stage tables until all the stage tables were populated. This could cause performance problems if a stage table is populated from another stage table. To resolve we have modified the process to rebuild the indexes after each stage table is populated.

FASTPORTAL

Case: 24044 Add Alerts to main site homepage

Added the ability for Alerts to be created on the main site homepage. Previously this feature was limited to only the individual application homepages.

Case: 24637 Add configuration setting for # of days of logs to retain

Added a new configuration setting in Site Administration #10 "Number of days of logs to retain (ex. errors, outgoing emails, scheduler history, etc)."

The default value is 1460 (i.e. four years).

Case: 25083 Allow HTML emailing from Email control

Updated the email hyperlink control (email icon in a reporting grid, or email all button at the bottom of a reporting page) to send emails in HTML format instead of Plain Text format.

Case: 25246 Show Creator of scheduled events

When viewing a scheduled event on the Scheduler calendar, the creator will now show in the details popup.

Case: 25281 My Schedule tab: show other events

Updated the My Schedule tab to display global blackout and maintenance windows.

FASTSTUDENT

Case: 25079 Add Course Level to Course Summary page

Course level and level description fields have been added to the Course Summary and Course Enrollment pages along with a level filter.

Case: 25144 Add parent information to Student warehouse and create reporting page

New Student Relationship reporting page has been added, and a hyperlink from the Personal Information page has been created.

Case: 25279 Display primary instructor first for multi-instructor courses

Course Summary and Enrollment Summary updated to display the primary instructor first then the other instructors in alpha order.

Case: 25304 Need to have stage table index rebuilt after table is populated

Previous we didn't rebuild the indexes on stage tables until all the stage tables were populated. This could cause performance problems if a stage table is populated from another stage table. To resolve we have modified the process to rebuild the indexes after each stage table is populated.

Case: 25345 General Student Info, move non-auto filters outside of custom SQL call

Baseline procedure updated to allow for SQL statement to be modified in the client override without the manually generated filters having to be done in the client call as well.
