
FASTBUDGET

Case: 39151 Create Budget Transfer Invalid Coding Audit

New report: Budget Transfer Coding Audit. This report shows Budget Transfer entries that have invalid FOAPAL coding. Similar to the Budget Invalid Coding Audit and Development Invalid Coding Audit reports.

Case: 39209 Budget Copy Series add "New Status" option

On the Manage Development Series > Copy and the Manage Budget Series > Copy to Dev Series pages there is now the option to assign an Approval Status for all records being copied. If a Status is selected it will be applied to all copied records. If no value is selected the current values for a record being copied is used.

Case: 40225 Add Current Year column to MultiYear report

Development Multi Year Planning reports now have a column for current fiscal year. The column is hidden by default. It is populated with records from all Active Development Series that are marked with "Show in MultiYear" on the Manage Development Series page.

Global Changes That Affect All Applications

Case: 26902 Enhance FAST attachments control to display Uploaded By and timestamp

The attachments control has been updated to include an information icon. When hovering over the information icon, a popup will display who uploaded the attachment and the date and time the attachment was uploaded.

Case: 31823 Ability to specify file names when exporting reports

We now use the Page Title as the default file name when exporting a report (for reports that are not Pinned), and the Pinned Report Name when exporting a Pinned Report.

We have also added the ability to override and customize the export file name.

When saving a Pinned Report the user can specify a specific file name if they don't want the Pinned Report Name to be used.

Foundation Reports and Custom Reports can also have a default file name specified either on the page level Administration tab, or in the Page Details step of the Page Builder Wizard.

* Note: if Scheduled reports are set to save to a file share, the file names will change. External processes could be updated to look for the new file names, or the source Pinned Reports could have the old original file names set in the new override export file name field.

Case: 32460 Report Builder shows required property on columns

When building a Custom Reporting page, the Required checkbox is no longer displayed on the Datagrid Column Setup step because it was not used (this is only for Data Entry pages).

Case: 32513 Count and Display - Grouping Option

When using the "Count and Display" group function (on the Advanced Options tab of a report) on a column, the comparison dropdowns when applying a column level filter will now show numeric comparison options.

Case: 35099 Improve workflow when building a custom report

We have added a new "Go to Report" button on the last step of the report builder wizard after clicking "Create Page" (to the right of the "Manage Custom Reports").

Case: 36309 ODP.NET data provider

The FAST website now uses the ODP.NET 4.122.1.0 64bit Managed Driver to connect to the FAST Oracle instance. We no longer require a 32bit Oracle client installed on the web server.

Case: 39760 When using replacement value filters, filter values do not export to PDF/Excel

Fixed an error when using replacement filters where they would not display in the filter trail when exporting to PDF/Excel.
