FASTJV

Case: 41517   Additional validation when posting

When posting a document, if a Trans Type of JE15 is used then additional validation will check to make sure each Fund entered balances to zero. If not an error will display:

"JE15 was used, but each Fund does not balance to zero. JE15 is for intra-fund only. Please ensure you are using an inter-fund Trans Type eg. FT01 or JE16."

Global Changes That Affect All Applications

Case: 41346   Graphing - Default Legend title when multiple Y axis are selected

When adding a Y-axis to a graph, the title of the selected field will be the default value for the Y-axis legend title.

Case: 41397   Query with #substitution# filters and -- style comments works in Query Builder but breaks in Query Viewer

Fixed a bug with Query Viewer where queries that contain #substitution# filters as well as --style line comments would break the query.

Case: 41616   Updates for handling Dashboard Filters when drilling down to pages

When clicking on the title of a grid/graph item on a Dashboard to drill down, if that Dashboard has filters which are being used the filter values will now overwrite the filters of the underlying Pinned Report instead of just appending to them.

For example, if your Pinned Report had "Example Filter = A" and Dashboard had "Example Filter = B" the system will show results for "Example Filter = B" where as prior to this update the report would run with "Example Filter = A AND Example Filter = B."
