
FASTJV

Case: 43534 Approval favorites

If an approver was favorited in the past but is no longer a valid selection then we will display the option as yellow and make it not clickable. The approver remains in the list and visible in case this approver is still valid for another application (ex. FAST Budget or FAST WebReq) but it can be removed by the user if no longer needed.

Global Changes That Affect All Applications

Case: 43405 Excel Import does not work on Dynamic Procedures screen

Users can now export from and import to the Dynamic Procedures screen (i.e. to move them from TEST to PROD).

Case: 43783 Client Warehouse issue - long select statements

If the select statement used to build a client warehouse table exceeded Oracle's listagg maximum length, the creation of a new client table would error out. This case changes how the insert statement is being built to accommodate long select statements.
