FASTFINANCE

Case: 43602   Data refresh improvements

Made performance, modernization and scalability improvements to the Finance data refresh process.

Case: 47074   Fix Excel export on User Defined report

Fixed an Excel export issue with the User Defined report formats.

Case: 47105   Fix Hyperlinks tab on Position reports

Fixed a bug with the Hyperlinks tab on the Current Year [Actuals/Budget] by Position reports.

Case: 47142   Explicitly close dblinks during Finance refresh

Added code into the Finance data refresh to manually and explicitly close any open database link connections to prevent the occasional "ORA-03150: end-of-file on communication channel for database link" errors when the ERP system is located in the cloud.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific settings.

FASTHR

Case: 42043   Convert HR Job Earnings to virtual page

Updated report in Jobs called Job Earnings to be a virtual page. Nothing should change visually but we suggest testing this page.

Case: 42044   Convert HR Employee Earnings Detail Year to virtual page

Updated report in Payroll called YTD Earnings Detail to be a virtual page. Nothing should change visually but we suggest testing this page.

Case: 42609   Create Audit reports for Job Labour Distribution Coding Values to show what is not valid in HR

Created new report under the Job menu called Job Labor Audit Report. This report will show any invalid codes based on provided by Effective Date.

Case: 42700   Create Report Employee Review

Created new Report called Employee Review.

Case: 46947   Update Job Labor Code Snapshot logic

Update Archive snapshot for Job Labor Code to remove effective dates and add into report. This will ensure all labor code data is loaded so any client business rules will have the correct data.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific settings.

FASTSTUDENT

Case: 42379   Course Planning & Forecasting

A new menu called Course Planning has been added within the student application. This new functionality provides:
1.   Extensive course planning functionality
2.   Annual budget and enrollment forecasting for strategic planning and budgeting purposes
3.   Revenue and expense projections using both granular and high-level scenarios

Look for live and recorded webinars on this functionality at https://mcsl.com under the "Training" link or submit a customer support ticket at customersupport@mcsl.com for more information about this new functionality.

Case: 46853   Update Student Grades Approval

Converted the Student Grades Approval page to use a new tree control.

Case: 46854   Update Student Grades Approval CRN

Converted the Student Grades Approval CRN page to use a new tree control.

Case: 46857   Add high school grades information to Administration report

Added new High School Course indicator to the Admissions reporting page with a hyperlink to the highschool courses page. This hyperlink will open up the page in popup mode and display all of the high school courses with grade and subject GPA. This column is deselected by default. This can be updated via the report Administration settings.

Case: 46878   Add Linked courses to Course Summary & Enrollment Summary reports

New columns displaying Linked To Courses, Linked To CRNS, and Linked To Course Descriptions have been added to both the Course Summary and Enrollment Summary reports. These have been added in 'Deselected' mode, which may be edited via the Administration tab of each report.

Case: 46923   Course Enrollment - db performance issue (LAG function) with "PREVIOUS" fields added in 4.6.05

The columns for previous tuition, fees and other charges have been removed from baseline. If these columns are needed, please contact us, and we will add them as part of your client customization

Case: 46961   Correct Concentration filter on Student Filter report

Prior issue with Concentration filter on student reports has been resolved relating to concentration end term.

Case: 47135   Make sure course is available on the grade entry page if is returned from the grade approval page

The system will now check to ensure a course is still available for grading if it is being returned from the Course Approval page. If it is not, the system will automatically set it up so that it can be accessed from the grade entry page.

Global Changes That Affect All Applications

Case: 43191   More advanced indexing through Client Warehouse Builder

Until now, when providing a comma separated list of indexes using Client Warehouse Builder, only one composite index would be created with all the columns included. If multiple indexes are desired instead, this can now be done via a semi-colon delimited list.

For example, in the past:

"col1, col2, col3, col4" would generate a single index with all four columns.

Now, you could do:

"col1; col2; col3; col4" to get four individual indexes, or:

"col1, col2; col1, col3; col1, col4" to get three composite indexes, etc.

Case: 46782   Ability to edit Restricted Fields through Datagrid Columns administration screen

Added a "Restricted by Role" column with a multi-select input control to the Datagrid Columns administration screen.

Case: 46794   Dashboard green filter text disappears when flipping between dashboard tabs

Fixed a bug on the Dashboard where the green Dashboard Filter cookie trail text in each grid/graph would disappear when flipping back and forth between two different Dashboard tabs.

Case: 46833   Data is not updating when filters are changed

Fixed a bug on the Filter Options tab of Reporting Pages when the CTRL+ENTER shortcut key combination is used to re-execute a report after manually typing a new filter value into certain filter controls.

Case: 46914   Creating Tags - create the tag upon tab key

Updated Followup tags in data entry pages. Currently when adding follow up tags to a record on a data entry grid, the user has to click out of the cell or hit the enter key before the tag is created. If the user tabs out of the tag field, the tag will not get created, instead the data entry grid will move to the next editable cell.

Case: 46940   User/Role Assignment breaks when a Role ID contains & character

Fixed a bug where a Role that contains an & character in the ID could not be assigned to a user on the User/Role Assignment screen.

Case: 46983   Indexes are dropped after editing a client warehouse table

Fixed a bug with the Client Warehouse Builder - when a table has In Development = false and a user attempts to edit it, any indexes on that table were being dropped before the error message displayed telling the user the table could not be edited. Now that this is fixed, the indexes will only be dropped (and then immediately re-created) if the table edit is successful.

Client specific cases may or may not appear in this list, depending on their impact on the baseline applications and / or site specific settings.
