Release Notes: Version 4.7.03

FASTFINANCE

Case: 47713 Warehouse Student tuition/fee detail information

Created a new warehouse table to replace live view FASTMCSL.FAST_STUDENT_FEED_V. The new table is FASTMCSL.SYNSTUDENT_FEEDS.

This new table stores Student AR subledger transaction details which allow users to drill down from Transaction Detail to Document Detail i.e. to get more details about the document than the GL itself contains (ex. student IDs and names, detail codes used, a breakdown of transactions, etc).

The performance of any queries/drilldowns against this new table is greatly improved, but the data refresh will take longer to run. If you have ever written a custom query against FAST_STUDENT_FEED_V you should switch to using SYNSTUDENT_FEEDS instead.

Case: 47926 Added new [Project To Date] and [Year End Project To Date] columns to User Defined

The User Defined report has new [Project To Date] and [Year End Project To Date] columns that range from the current fiscal year up to four fiscal years prior.

Case: 48058 Add crosstab functionality to Trial Balance

Added the ability to generate Cross Tabs on the Trial Balance report. When this is selected via the Advanced Options tab, the "Suppress Subtotals?" checkbox filter on the Filter Options tab will be automatically set when the report is executed.

Case: 48118 Add Invoice Cancelled Date and Cheque Cancelled Date to VIEW_INVOICECHEQ_XREF

Added three new columns to FASTMCSL.VIEW_INVOICECHEQ_XREF:

- INVOICE_CANCEL_DATE
- INVOICE_CANCEL_IND
- CHEQ_CANCEL_DATE

Global Changes That Affect All Applications

Case: 15903 Update page level Administration tab

We have given the page level Administration tab a major overhaul.

Case: 30158 Ability to switch between "grid view" and "single-record view"

Added a new button to the toolbar above data grids (next to the Grid Settings gear button) which allows a user to switch between grid view and single-record view.

Case: 44520 Add WYSIWYG interface to email control

Improved the interface when editing the body of an email message.

Case: 47738 Add tooltip/description columns to Datagrid Columns

Added the ability to specify/customize tooltips when hovering over a datagrid column header.

This can be added/edited in the custom page builder wizard, on the page level administration tab, or from the Datagrid Columns administration screen.

When nothing is specified for a tooltip, the column title will be used as the tooltip (as it did in prior versions).

Case: 47777 Update page level Administration tab security when the user is the report creator

Previously, when a user was the creator of a custom report, they would always see the page level Administration tab on that specific report regardless of whether they still have access to build reports. We have changed this so that the creator will only see the page level Administration if they still have access to the Report Builder (i.e. must have Report Editor role, application administrator role, or site administrator role as well).

Case: 47806 Better name for page level administration role

Renamed the "Inline Label Editing" roles to "Page Level Administration" in each application to better describe what the role does: it grants access to the page level Administration tab.

Case: 48020 Add "Recently Closed" option to Client Support cases dialog

Added a "Recently Closed" option to the case filter on the Client Support cases popup dialog.

Case: 48150 Manage Custom Table - Unable to delete column from custom table

Fixed a bug that was preventing the dropping of a column from a custom data entry table.

Case: 48160 Allow older apps to use Dynamic Filter Procedures

Some client specific legacy applications can now use Dynamic Filter Procedures.

Case: 48272 Communication batch history (summary) report does not work for non Site Admins

Fixed a bug with the Communication Batch History report that was only showing results to Site Administrators and not to Application Administrators.
